

Pinpoint Labs Releases Net Harvester

Industry Leading Electronically Stored Information (ESI) Collection Software Includes Remote Stealth Job Launch and Tracking

*Each day, corporate IT managers, forensic computer examiners, and litigation support professionals need to remotely manage collections jobs with limited resources. **Net Harvester** provides affordable Enterprise level ESI collection software that provides real-time status updates and remote launch capabilities.*

For Immediate Release: Murray, NE, December 1st, 2011 --- Pinpoint Labs, a forensic software and litigation support firm, today announced the release of the latest addition to its **Harvester** family of forensic software – **Net Harvester**. This new product is designed to enable a simple and straightforward approach to remote, defensible custodial collections.

With the introduction of the **Net Harvester**, users can view project details from a simple dashboard that color codes jobs based on their completion status. Additionally, users can easily generate reports of the collection process which can be saved and reviewed by the legal team. The computer inventory feature will create a list of all computers listed on the domain or workgroup.

The goal of any electronic discovery collection is to preserve and collect files while keeping the chain of custody intact. **Net Harvester** users can also create a custom list of systems which need to be collected and with a few clicks launch customized job tickets that can include keyword search, deduplication, deNisting, email filtering, and many other highly targeted culling options.

In keeping with the best practices for preserving and collecting data, Pinpoint Labs designed **Harvester** to easily gather multiple files with minimal impact on client systems. When the client project is finished, all the critical data is neatly organized and forensically sound. It is also one of the most affordable solutions available to collect and preserve project data.

As Jon Rowe, President of Pinpoint Labs and a highly experienced Certified Computer Examiner (CCE) noted,

*"We are very excited about the release of **Net Harvester**. Offering Enterprise level tools at affordable price points has always been our goal. The simple, and elegant dashboard provided in **Net Harvester** will allow our Harvester clients to easily manage collection jobs of all sizes."*
