

Pinpoint Labs Releases One Click Collect - Harvester 2.0

Industry Leading Electronically Stored Information (ESI) Collection Software Includes Keyword Culling and PST Regeneration

*Each day, corporate IT managers, forensic computer examiners, and litigation support professionals need to perform keyword-targeted collections of custodian work product that reside in file shares, on client systems, and in other data sources across the network. **One Click Collect Harvester 2.0** rapidly culls down hundreds of Gigabytes or even Terabytes of data providing ready to review, relevant documents and email.*

Murray, NE (For Immediate Release) November 1st, 2010 --- Pinpoint Labs, a forensic software and litigation support firm, today announced the release of the latest addition to its **One Click Collect** family of forensic software – **Harvester 2.0**. This new version is designed to perform keyword culling for loose files and Microsoft Outlook PST files and attachments, making it the perfect choice for projects requiring targeted collections outlined in legal holds. With the ability to dedupe and regenerate new PST files, the size of ESI collections can be significantly reduced without the costs associated with per gigabyte or custodian fees.

The goal of any electronic discovery collection is to preserve and collect files while keeping the chain of custody intact. **One Click Collect - Harvester 2.0** has the ability to cull down the collection at the point of contact. This makes multiple collections much easier to manage and less expensive to process. **Harvest 2.0** preserves file timestamps, metadata and the chain of custody.

In keeping with the best practices for preserving and collecting data, Pinpoint Labs designed **Harvester 2.0** to easily gather multiple files with minimal impact on client systems. When the client project is finished, all the critical data is neatly organized and forensically sound. It is also one of the most affordable solutions available to collect and preserve project data.

As Jon Rowe, President of Pinpoint Labs and an experienced Certified Computer Examiner (CCE) noted,

"We are very proud to announce the Harvester 2.0. Once again we have responded to the marketplace and the need for affordable, defensible ESI collection software. The new keyword filtering and PST regeneration features are equally effective for collecting data in the field or as first pass filtering for in-house processing."

For more insight on how **One Click Collect - Harvester 2.0** can save you time and money, please visit the Pinpoint Labs website at www.pinpointlabs.com.

About Pinpoint Labs

Pinpoint Labs was founded by Jon Rowe and James Beasley, who are Certified Computer Examiners and members of The International Society of Forensic Computer Examiners. Their experience includes over fifteen years of litigation support and more than two decades in software development.
