

Pinpoint Labs Releases One Click Collect - Harvester Server Edition

Forensically Collect and Preserve Active File Data From Multiple Custodians At Same Time

*Each day, corporate IT managers, computer forensic examiners, and litigation support professionals need to collect relevant files that reside in file shares, on client systems, and in other data sources across the network. **One Click Collect Harvester Server Edition (OCCHS)** solves the common problems encountered when using alternative copy utilities.*

Murray, NE (For Immediate Release) May 21st, 2010 --- Pinpoint Labs, a forensics software developer and litigation support firm, today announced the release of the latest addition to its **One Click Collect** family of forensic software – **Harvester Server Edition**. This new version is designed to simultaneously take care of multiple custodian collections that reside on the network, making it the perfect choice for large and small scale ESI collections and legal holds. With the ability to script the software and its user friendly interface, it is the most hassle-free way to collect and preserve electronic discovery files.

The goal of any electronic discovery collection is to preserve and collect files while keeping the chain of custody intact. **One Click Collect - Harvester Server Edition (OCCHS)** has the ability to cull down the collection at the point of contact. This makes multiple collections much easier to manage and less expensive to process. **OCCHS** gives you unlimited concurrencies to dedupe, deNIST, cull, and filter ESI collections.

In keeping with the best practices for preserving and collecting data, Pinpoint Labs designed **OCCHS** to easily gather multiple files with minimal impact on client systems. When the client project is finished, all the critical data is neatly organized and forensically sound. It is also one of the most affordable solutions available to collect and preserve project data.

As Jon Rowe, President of Pinpoint Labs and an experienced Certified Computer Examiner (CCE) noted,

"We are very proud to announce the Harvester Server license. We constantly hear about the corporate budget restraints related to litigation. We know we have created a product that companies can afford, and allows them to complete defensible collections."
