

Pinpoint Labs Releases -- One Click Collect (Automated ESI Collection Software)

Each day, corporate IT managers, computer forensic examiners, and litigation support professionals are tasked with collecting relevant files which reside in file shares, on client systems, and other popular data sources. Pinpoint Labs has released its new One Click Collect file collection platform. Its innovative automated features eliminate several common file collection problems and reduces client costs.

Murray, NE ([PRWEB](#)) August 24, 2009 -- [Pinpoint Labs](#), a forensics software developer and litigation support firm, today announced the release of their latest product line of forensically sound file collection software, [One Click Collect](#) - Onsite, and One Click Collect - Harvester. Both versions allow users to automate file collections using predefined file requests that can automatically launch when the media is plugged into the host computer. Preserving and collecting relevant files has never been easier or more affordable.

One Click Collect preserves metadata and file time stamps, and creates a chain of custody log for the process. Since collected files are stored in their native format, no additional software for conversion is required. Collected files can be processed or analyzed with all electronic discovery and computer forensic applications. When a collection project is finished, the One Click Collect - Onsite license can be relocated to a different platform within seconds.

One Click Collect - Harvester users can immediately begin collections across the country, or around the world. In addition to automated collection jobs, One Click Collect - Harvester allows users to quickly and remotely deploy a network or companywide targeted electronically stored information (ESI) collection.

The goal of any [electronic discovery collection](#) is to preserve and collect files while keeping the chain of custody intact. In keeping with best practices for preserving and collecting data, Pinpoint Labs designed its One Click Collect product line to easily gather files with minimal impact on client systems.

As President of Pinpoint Labs and Certified Computer Examiner Jon Rowe noted, "Developing an automated collection tool was the natural evolution of our SafeCopy 2 software product line. Automated self collection is used by our One Click Collect clients to save time, and in many cases, eliminate the need for a forensic examiner. One Click Collect provides a more defensible collection and eliminates many common operator errors at an affordable price."

Never before has forensically sound ESI collection been so easy! No additional software, exports or processing are required to access files. For more information about One Click Collect ESI Collection Software, please go to [ESI Collection](#).
