

Pinpoint Labs Harvester Edition now includes PRODUCTION LEVEL DEDUPING!

Whether you are working with a current ESI collection or about to start a new Legal Hold/collection; the goal is still the same. Complete as targeted of a collection as possible, without eliminating potentially relevant files. Why? To reduce the time and costs of collection, processing and hosting.

Features:

- deDupe files and *Email from individual custodian systems, and across file shares
- Log excluded files and display tally during processing
- Portable SQL database provides full functionality even while running from a stick! (USB Flash Drive)
- *Create new file hash databases on-the-fly
- *deDupe, filter, regenerate, and export email messages from multiple sources to 10 different formats

With the ever expanding costs of electronic discovery, firms and their clients are looking for ways to reduce the costs of litigation. Many are doing self collects and culling down the data as much as possible to keep the collection lean, clean, and cost effective.

Our Harvester software can do all of the aforementioned and give you a forensically sound and organized collection. It can cull data by deNISTing, deduping, and other filtering options at the point of collection. Or you can bring the software back in house and do the same to data being sent to you from opposing counsel. So what's the catch? There isn't any, and here is what one of our customers had to say about our Harvester software: "...by far the best value in eDiscovery tools on the market".

*ETA – August 1st, 2010 (Included at no additional cost for Pinpoint Harvester customers)
